

Owls: Worksheet

Are there different types of owl?

There are over 150 species of owl. They live in every part of the world except Antarctica.

Are all owls nocturnal?

No. The pygmy owl, for example, is active in the early morning. The short-eared owl likes the afternoon.

Why can owls fly silently?

They have special feathers. These stop the wings from making a noise.

Which are the biggest owls?

The Great Horned owls are the largest. The Eurasian Eagle is perhaps the biggest of all.

And the smallest?

Elf owls are the smallest. These tiny owls weigh about 40 g. They are 12.5 to 14.5 cm long and have a wingspan of about 27 cm

How do owls eat?

Like all birds, owls don't have teeth. They swallow mice and other small animals without chewing.

Are owls blind?

No. During the day their eyesight is not great. But at night it is very good.

Why do owls have good hearing?

Their ears are unusual. One ear is higher than the other. This means owls can focus their hearing on small movements

Can an owl move his eyes?

No. But he can move his head. He turns his head to see.
